

Developing an approach to implement green-blue infrastructure networks as an adaptative measure against global change in mountain areas of the Iberian Peninsula

GS 4: How Ecology serves the Society: services and nature-based solutions

1st Meeting of the Iberian Ecological Society and XIV AEET Meeting , 07th February 2019, Barcelona, Spain

What is Green/Blue Infrastructure Network (BGIN)?

Provisioning

Regulation and Maintenance

Cultural

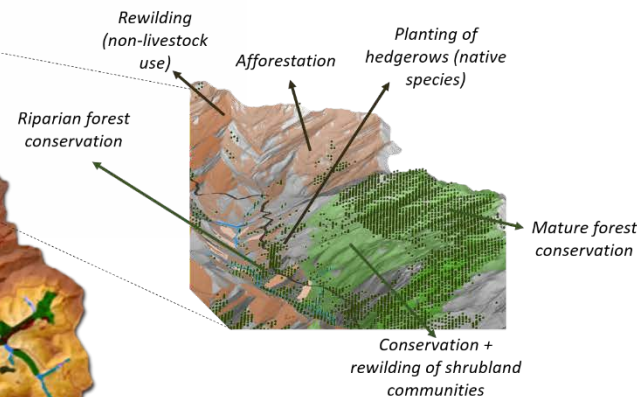

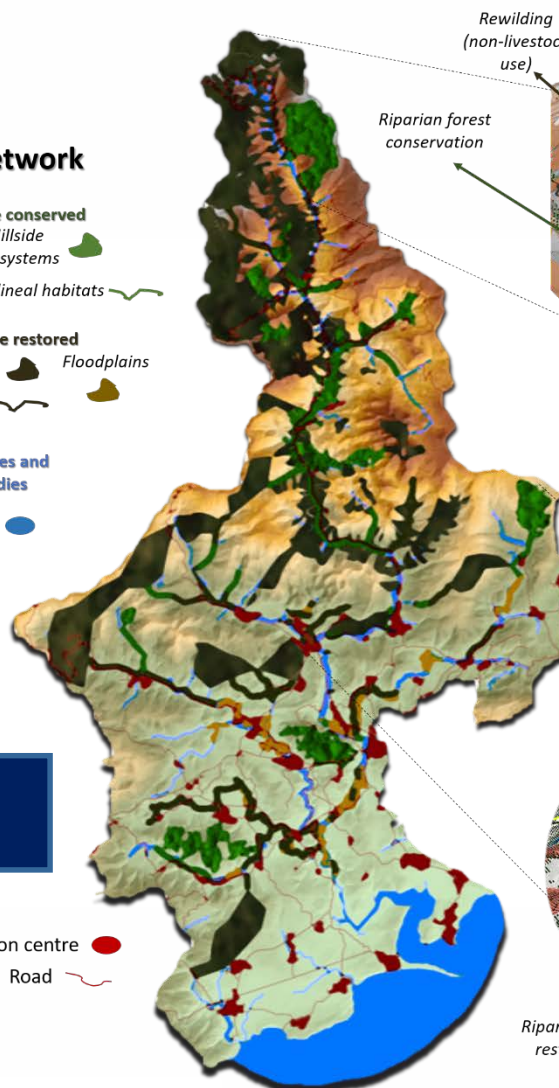

Ecosystem services

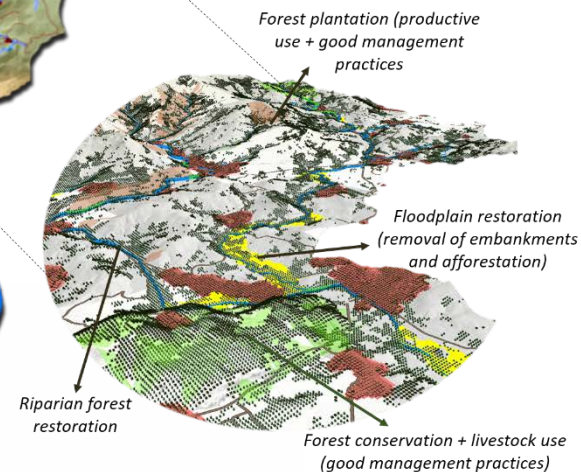

BGIN Network

- Elements to be conserved**
 - Hillside ecosystems
 - Riparian and other lineal habitats
- Elements to be restored**
 - Hillside areas
 - Floodplains
 - Riparian areas
- Water courses and water bodies**

- Population centre
- Road

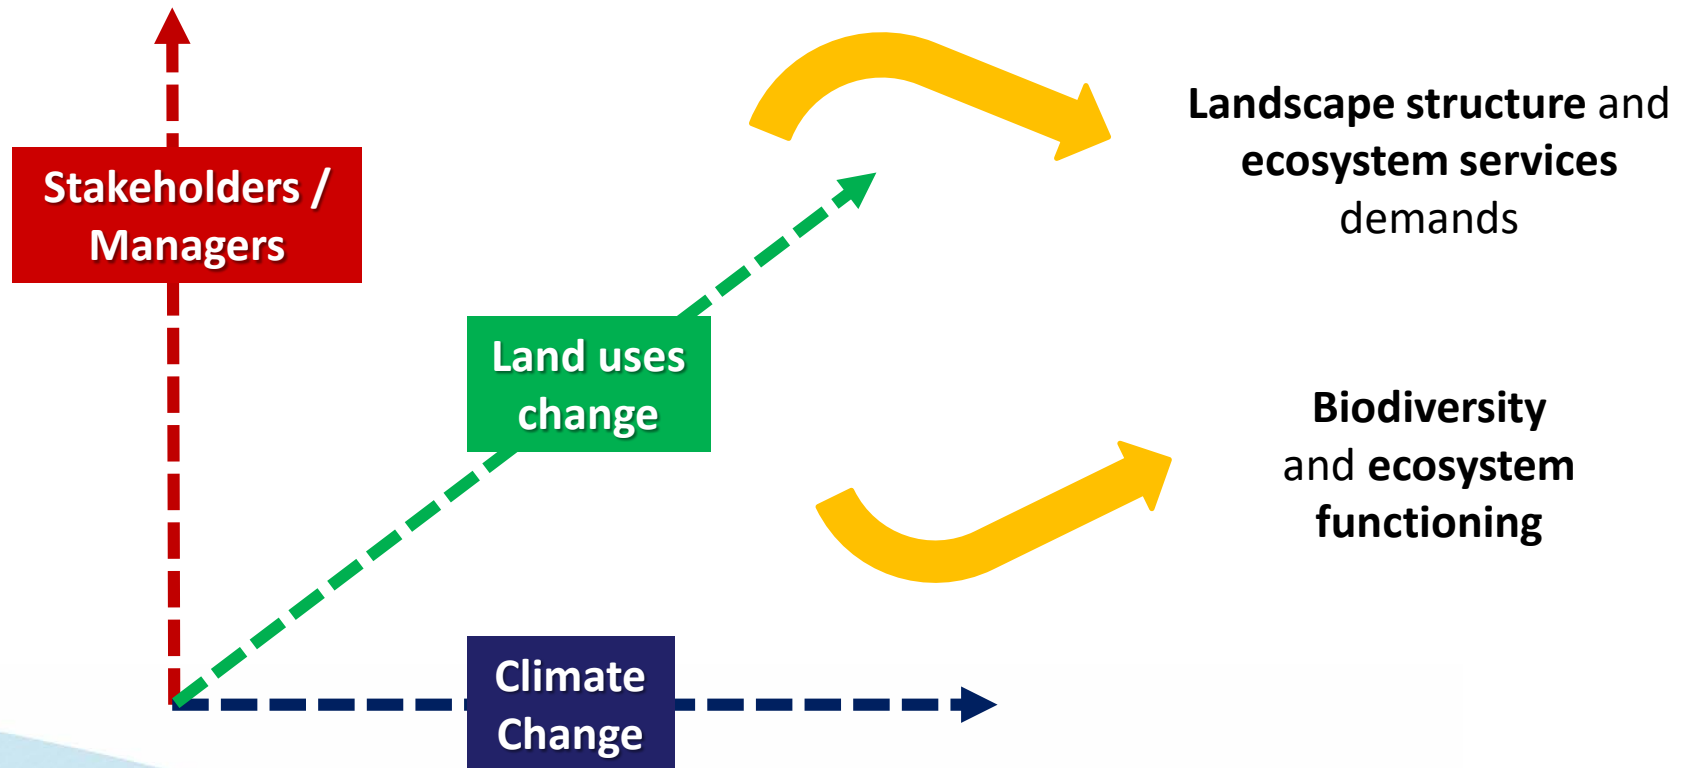

Some examples of BGINs elements

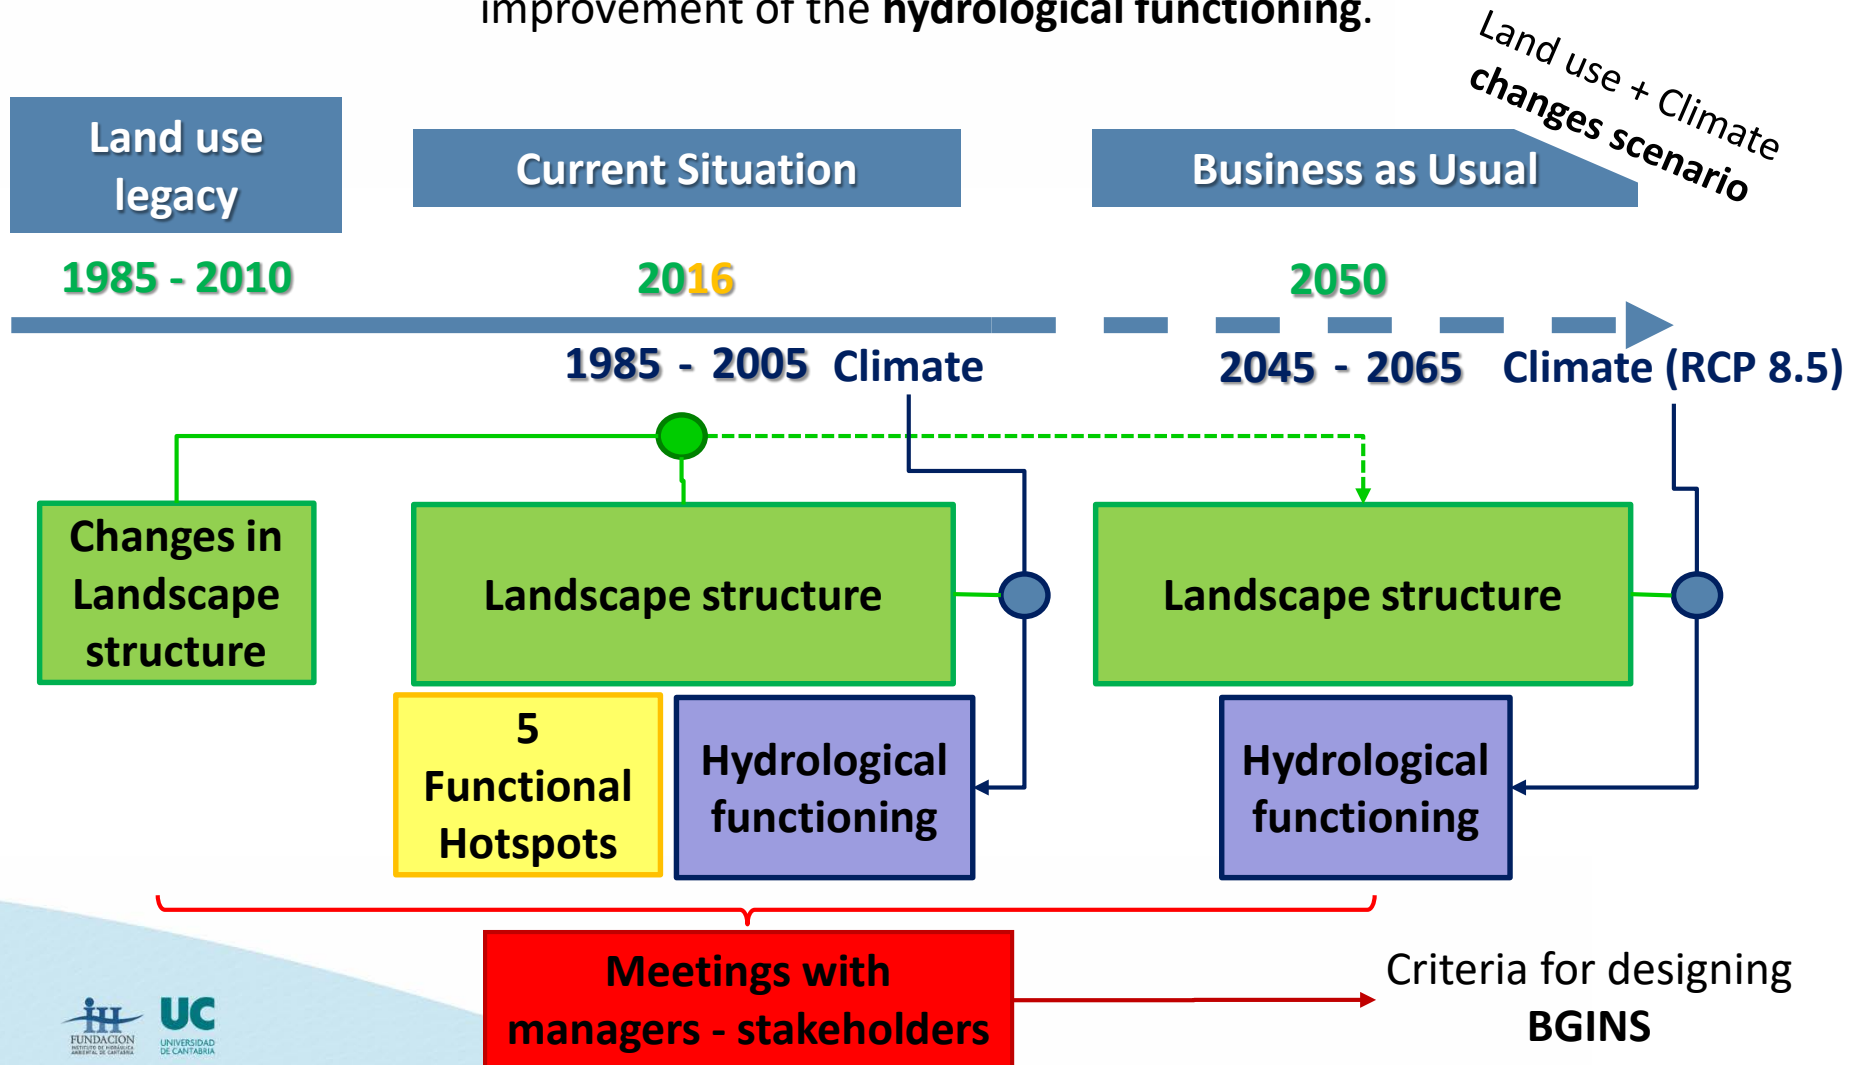

Blue/Green Infrastructures Networks: towards an adaptative territorial management

In our **Global Change** context, BGINs design should be respond to the **main drivers** that control the **landscape evolution**.

Developing a **methodology to design BGINs** for mountain catchments of the Iberian Peninsula following two main **criteria**: the optimization of the **landscape structure** and the improvement of the **hydrological functioning**.

Landscape structure

Current Situation

Vegetation occurrence points:
 SIOSE
 Vegetation map of PP.NN

Spatial modelling algorithm:
 Support Vector Machine
 (SVM)

Spatial resolution:
 20m

Land cover/use legend

- Mature broadleaf forest
- Young broadleaf forest
- Coniferous forest/plantation
- Shrubland
- Pastures
- Agrarian
- Rocks
- Urban
- Water

Environmental variables

Slope, altitude and soil properties

Abiotic variables

Sentinel and
 LiDAR

Landscape structure

Business as Usual

Socio-economic
 inputs

Spatial resolution:
 30m
